
13 October 2026 beat spectra · 800 MHz carrier
W: 1 MΩ scope connected. NS: scope disconnected.
Recorded RF power; WNS2 has a wider RBW
W: 1 MΩ scope connected · RBW 3 Hz
WNS: scope disconnected · RBW 3 Hz
WNS2: scope disconnected · RBW 10 Hz
Displayed power (dBm)
Offset from displayed carrier peak (kHz)
Line heights at native RBW; 2.54 kHz display spacing
Carrier-relative level (dBc)
Approximate broadband comparison; not a phase PSD
Relative level − 10 log₁₀(RBW/Hz) (dB)
300–400 kHz shoulder and isolated +252 kHz feature
Positive-peak detector, one sweep; all files flag an incomplete sweep. Nominal RBW correction omits ENBW and detector bias.
