50 kHz feature: account for analyzer display spacing
All three source traces use 3 Hz RBW
Resolved line cluster can resemble a broad hump
Carrier-relative level (dBc)
Carrier offset (kHz)
ADF4108: original 454 Hz spacing
ADF4108: max within each 2.54 kHz bucket
FPGA W: native 2.54 kHz spacing
FPGA WNS: native 2.54 kHz spacing
Coarsening takes displayed maxima, not a new measurement or a noise-power integral.
